

# To tube or not to tube?

The top 4 benefits of our  
tubeless tire and wheel solution  
for static caravans

1

# Safety, safety, safety

**A tubeless tire solution is simply safer.**

With fewer chances of bursts, blowouts, and wheel damage, our solution keeps your caravan - and everyone around it - safer.

Here's how 

## **Safer by design**

Tubeless tires eliminate the risk of explosive deflation caused by pinched inner tubes during high loads or sharp cornering.

## **Safety seal**

Tubeless tires seal around punctures, preventing dangerous blowouts, especially when moving or towing your static caravan.

## **Safety humps**

Our wheels feature safety humps that keep the tire securely in place, even under high lateral forces, reducing the risk of tire roll-off or bead sliding.

# 2

## Run cool benefits

Running cooler means running longer.

### **Heat dissipation**

Without inner tube friction, our tubeless tires run cooler, reducing the chances of heat-related failures.

### **Longer lifespan**

Cooler operation means increased safety and less maintenance. This helps keep your caravan road-ready for longer.

# 3

## Strength meets flexibility

By combining strong wheels with flexible tires, our solution offers a high-performance option for your static caravan.

### Wide rim

A wider 4.5" rim positions the tire beads further apart, enhancing stability under uneven forces.

### Cushioning

Flexible sidewalls provide excellent impact resistance, allowing the tire to handle higher loads at lower pressures.

# 4

## Confidence in quality

Our tubeless tire and wheel solution is the top choice for peace of mind.

### **Approved by the NCC**

Our tubeless tire and wheel solution is the first to receive approval from the National Caravan Council (NCC) in the UK.

### **Trusted by Europe**

Widely supplied throughout mainland Europe, our solution meets and even exceeds rigorous industry standards for safety and quality.

A man with short brown hair and blue eyes, wearing a purple polo shirt, is looking upwards with a focused expression. He is in a dark industrial setting, likely a factory, with blurred metal structures and lights in the background. A white arrow curves from the right side of the image towards the text.

**We produce the wheels in-house  
at our ISO 9001 and 14001  
certified steel wheel factory in  
Croatia.**
