

STEEL WHEEL MANUFACTURING, CROATIA

Your trusted partner
for high-quality steel
wheels

What we do

We specialise in manufacturing both standard and bespoke steel wheels for agricultural, industrial, utility, groundcare and light transportation applications.

Our 200+ employees engineer and produce more than 1 million wheels a year, varying between 4-inch pressed wheels and customised 54-inch spun wheels.

Why choose our steel wheels?

Precision engineering and customisation

- > In-house R&D and tooling for tailored solutions

Flexible production

- > High and low-volume capabilities with digital manufacturing technology

Corrosion-resistant

- > E-coated for reduced risk of rust

Customisable product

- > Many possibilities to tailor stud holes, bores, seating, form etc.

State-of-the-art finish

- > Automated paint technology with any colour available

Responsible manufacturing

- > Factory powered by 100% renewable energy

Our capabilities

Manufacturing

With a specialised and flexible set-up, we can produce both standard and custom solutions while always adhering to certified OEM quality standards. Our automated lines for rolled and pressed wheels allow us to meet demands for large volume production, and our flexible spinning technology caters for small batch sizes and custom products.

Research and Development

In-house R&D team for high-performing wheels designed to meet changing industry demands. We use computer simulations combined with laboratory and field tests to continuously optimise our wheel design process and use of materials. Supported by the KENDA Europe Technical Centre in Germany, we employ value engineering to deliver steel wheels tailored to the evolving needs of our customers.

Quality assurance

We source high-performance materials through long-term partnerships with trusted suppliers. Our teams are regularly trained in order to keep improving our quality standards and uphold efficient, safe workflows. Our finished wheels are tested by a dedicated quality unit using technology such as salt spray testing, 3D measuring and digital paint thickness monitoring.

Tooling

We design, engineer, produce and maintain the tooling for most of our production processes in-house, so we have full control from start to finish and can ensure consistent quality and a flexible production set-up.

Our facility is ISO 9001 & ISO 14001 certified.
We are a member of ITMA, EUWA & ETRTO

**What we can
produce**

Rolled wheels 12"-20"

Fully automated end-to-end process from rolling to assembly for a highly precise and consistent result.

Spun wheels 8"-30,5"

Flexible spinning processes for smaller and medium sized batches + customer requirements like asymmetrical profiles.

Pressed wheels 4"-14,5"

Wide range of possible integral hub configurations for almost any thinkable axle fitment and application. Central Hub Fitment or for Off-set Hub Fitment + a wide range of bearings and bushes.

Made-to-measure and dual wheels

Dedicated workshop equipped with advanced machinery, possibility for custom disc and rim configurations, production of dual wheel components and supplying of complete kits.

About KENDA

KENDA was founded in Taiwan in 1962 and is now one of the world's leading tire manufacturers operating across Asia, the US and Europe. Powered by a passion for mobility, we design and manufacture tires for your journey. We continuously work to ensure progression and to keep the world moving on tires and wheels that are fit for life. With more than 14.000 employees, 8 tire factories, 6 wheel factories, 4 technical centres and a global network of operation and distribution sites, we are proud to be a reliable partner for our customers.
